## **Company Profile**

At a glance

## Company Profile

---

IT-Genius was founded in 2002 at a time when small businesses were just beginning to embrace the power of information technology to cut their costs and boost their business. We knew firsthand the impact a properly managed I.T. system can have on our clients' success. We have also seen the disasters that can result when companies depend on poorly planned and improperly managed I.T. systems or -- even worse -- no I.T. systems at all.

What we have learned over the years is that the I.T. needs of small and medium sized businesses can be just as sophisticated as large enterprises. Unfortunately, most people are too busy running their business to give proper attention to their I.T. systems.

Our business model is different. We have built our business to **preventing I.T. problems** from occurring in the first place. Rather than profiting from our clients' problems, we invest in their success. This long-term thinking has allowed us to grow becoming one of the **fastest growing I.T. service firms in the Southern California**.

## Target Market

---

Today, our service and technical team consists of over 25 business technology professionals: web/graphic designers, programmers, and technicians. We work with clients in nearly every major category:

Health Care	Hotel chains	government
Medical	Insurance	Financial services
Nonprofit	marketing	professional services
